PROJECT REQUIREMENTS & CLIENT CONFIRMATION

Website, Physical Library Management and Online Learning Platform

A working document to review the proposed modules, understand how each workflow should operate, and confirm what will be included before development scope, cost and timeline are finalized.

DOCUMENT DETAILS	VALUE
Client / Institute	[Enter client or institute name]
Prepared by	[Enter your name / company]
Document version	Version 1.0 - Draft for client confirmation
Date	24 October 2026
Status	For review, comments and approval

How to use this document

Please review each module and the decision register. Mark items as Confirm, Change or Not Required, and add comments wherever the institute has a different process in mind. Features marked as optional are not assumed to be included until they are approved in writing.

This document describes the proposed functional requirements and workflows in plain language. It is intended to create a shared understanding between the client and delivery team; it is not, by itself, a final quotation, delivery schedule or legal contract.

Document guide

SECTION	WHAT IT COVERS
1. Project overview	Purpose, objectives, assumptions and proposed site structure
2. Users and access	Student, admin and optional staff roles
3. Module requirements	Home & Photos, Student Inquiry, Library, Courses, PDFs and Mock Tests
4. Shared workflows	Login, payments, notifications and account provisioning
5. Reports and operations	Dashboards, finance reporting, security and maintenance expectations
6. Client decision register	Questions that must be answered before scope and estimates are finalized
7. Acceptance and handover	Test scenarios, delivery expectations, changes and sign-off

1. Project overview

The proposed solution is a single website for an educational institute or coaching centre. Visitors should be able to understand the institute and enquire about its offerings. Registered students should be able to manage their physical library membership, purchase courses and PDFs, and attempt online mock examinations from one account. Authorized staff should manage content, students, subscriptions, payments, tests and reports from an admin area.

The website will have six main modules:

- Home and Photos - public information, announcements, banners and image galleries.
- Student Inquiry - lead capture and follow-up for prospective students.
- Library - physical library subscriptions, time slots, membership tickets, attendance and renewals.
- Courses - exam-preparation course catalogue, paid access and learning content.
- PDF - free and paid digital learning materials.
- Mock Tests - examination categories, timed tests, scoring, results and performance feedback.

Core design principle

One student account should work across all modules. Buying a library subscription should not automatically buy a course, and buying a PDF should not grant access to a mock test unless the client explicitly chooses a bundle or package.

Project objectives

- Give students one place to discover the institute, contact staff, pay for services and review their activity.
- Reduce manual work for staff through self-service purchases, automated confirmations, expiry reminders and reports.
- Allow authorized staff to update ordinary website content, courses, PDFs, subscription plans and test questions without a developer changing code each time.
- Keep an auditable record of payments, library access, digital purchases and test attempts.
- Provide a platform that can later support additional exams, courses, content types and staff roles.

Working assumptions

- The site will be responsive and usable on current desktop and mobile browsers.
- The client will supply institute branding, approved course descriptions, fees, rules, photos, videos, PDFs, exam questions and legal/policy content.
- Payment gateway approval, hosting, domain, storage and messaging service accounts may require client participation and recurring fees.
- Exact third-party products, final pricing, delivery dates and implementation technology will be agreed separately after the requirements are confirmed.

2. Users, roles and navigation

2.1 Proposed user roles

ROLE	WHAT THE USER CAN DO
Public visitor	View home pages, photos, course information, available PDFs and test descriptions; submit an inquiry; register or log in.
Student	Manage profile; buy and renew a library subscription; view ticket and attendance; purchase courses and PDFs; access entitled content; attempt tests; review notifications and history.
Super admin / owner	Manage staff accounts and permissions, system settings, plans, payment settings, reports and all modules.
Library operator	Find student memberships, verify tickets, record check-ins, review subscription status and perform approved library actions.
Content / course manager	Manage course pages, chapters, videos, downloadable resources, PDF files, banners, galleries and announcements.
Test manager / examiner	Manage exam categories, question banks, mock tests, scoring rules and test results.
Finance staff (optional)	Review transaction records, offline collections, refunds, expenses and financial reports without unrestricted access to unrelated administration.

The client should confirm whether one person will use the full admin role or whether different staff members need restricted permissions. Staff accounts should be individually identifiable so that important changes can be traced to the person who made them.

2.2 Proposed main navigation

PUBLIC WEBSITE	STUDENT ACCOUNT AREA	ADMIN AREA
Home	Dashboard / My Account	Overview / Dashboard
About / Home & Photos	Library Subscription & Ticket	Library Plans, Members & Attendance
Student Inquiry / Contact	My Courses & Learning Progress	Courses, Chapters & Videos
Courses	My PDFs / Purchases	PDF Library & Sales
PDF Materials	Mock Tests & Results	Question Bank, Tests & Results

PUBLIC WEBSITE	STUDENT ACCOUNT AREA	ADMIN AREA
Mock Tests	Orders, Payments & Notifications	Inquiries, Finance, Reports & Settings

Access rule

Public visitors may view published public information. Purchases, student records, answer keys, paid materials and administrative actions must be protected by appropriate login, entitlement and staff-permission checks.

3. Module requirements and workflows

3.1 Home and Photos

Purpose: present the institute professionally and help visitors understand its facilities, courses and services before they enquire or register.

Visitor workflow

1. Visitor opens the home page and sees the institute introduction, key facilities, current announcements and links to the six modules.
2. Visitor opens the photo gallery and browses published albums such as library facilities, classrooms, events, achievements or activities.
3. Visitor opens a relevant course, library or inquiry page to take the next step.

Admin workflow

1. Authorized admin signs in and opens the content management area.
2. Admin adds or edits text, banners, photos, album names, captions, announcements and contact information.
3. Admin previews the content and publishes it, or saves it as a draft if draft/publish functionality is approved.

Requirements to confirm

- Which pages are needed in addition to Home, Photos, Courses, Library, PDFs, Mock Tests and Contact/Inquiry?
- Should the client be able to add or reorder home-page sections and change banners without developer assistance?
- Should photo galleries support albums, captions and publication dates?
- Will student result photos, testimonials or achievements be published? If yes, the institute must confirm the permission/consent process.

3.2 Student Inquiry

Purpose: collect prospective student details and help the institute track each enquiry until it is resolved or converted into an admission, course purchase or library membership.

Visitor workflow

1. Visitor chooses the inquiry/contact option and enters their name, contact number, email (if required), area of interest and message.
2. The website validates the form, protects it from common spam submissions and records the enquiry.

3. The visitor sees a confirmation message. An email or other notification may be sent if included in the agreed scope.

Admin workflow

1. The inquiry appears in the admin dashboard with a date, contact details, interest and status.
2. Staff contact the person and record an internal note or follow-up date.
3. Staff update the status to New, Contacted, Follow-up Required, Converted or Closed.
4. Admin filters inquiries by date, status or interest and exports a report if reporting is included.

Recommended requirements

- Search and filter inquiries; maintain status, notes, assigned staff and follow-up date.
- Optional click-to-call or WhatsApp contact link, subject to client approval and service availability.
- Limit access to student inquiry details to authorized staff and avoid exposing contact information publicly.
- Confirm consent text and retention rules for personal information submitted through the form.

3.3 Library Management

Purpose: manage subscriptions to a physical library, including plan purchase, time-slot selection, payment, membership tickets, entry validation, expiry reminders and renewals.

Student purchase and access workflow

1. Student registers or logs in and opens the Library section.
2. Student views available subscription plans, fees, duration, permitted attendance days, available time slots, library rules and cancellation/renewal terms.
3. Student selects a plan and the desired time slot/days. The system checks availability and seat capacity before checkout.
4. Student reviews the final amount and completes payment through the configured payment provider.
5. The server verifies the payment. Once payment is confirmed, the system creates the subscription, calculates its start and end dates, generates a membership ID/ticket and records the transaction.
6. The student receives an on-screen confirmation and, if included, an email with the membership ID, selected plan, permitted days/time, start date, expiry date, paid amount and support/contact details.
7. At the library, staff validate the ticket or membership ID, check active status and confirm that the selected slot/day is permitted. The system records attendance if that feature is enabled.
8. Before expiry, the system sends reminders according to an agreed schedule. The student can review the status and renew. Renewal rules must define whether the new period starts immediately or after the existing subscription ends.

Subscription plans

PLAN TYPE	PROPOSED DURATION	ADMIN-CONTROLLED SETTINGS
Monthly	1 calendar month	Price, allowed days, slot(s), capacity, start rules and renewal rules.
Quarterly	3 calendar months	Price and the same applicable access settings.
Half-yearly	6 calendar months	Price and the same applicable access settings.

PLAN TYPE	PROPOSED DURATION	ADMIN-CONTROLLED SETTINGS
Annual	12 calendar months	Price and the same applicable access settings.
Custom plan (optional)	Defined by admin	Only include if the client needs special plans or promotional packages.

The amounts are intentionally not specified here. The client must supply the actual fee schedule and decide how partial months, holidays, late starts, pauses and extensions are handled.

Admin and staff workflow

1. Admin creates or updates plans, fees, permitted days, time slots, capacity and rules.
2. Admin can create a subscription manually for a student. The system records who created it, the amount charged, whether payment is received, the payment method/reference and the dates of access.
3. For a new student, admin creates a profile and sends a secure account activation link or one-time setup code. Permanent passwords should not be displayed or shared in plain text.
4. Library staff search by name or membership ID, review status and validate entry. Check-in/check-out records may be maintained if approved.
5. Admin reviews active, expiring and expired memberships, renewals, cancellations, attendance, collections and expenses.

Key rules and edge cases

- Payment pending or failed: no active paid access until the payment is verified; a pending order should be visible for reconciliation.
- Duplicate payment callback: one successful payment must not accidentally create duplicate memberships or charges.
- Slot full: the system should prevent an over-capacity booking or clearly offer a waitlist if that option is approved.
- Expired or suspended membership: the ticket should fail validation or clearly show the access status to authorized staff.
- Offline/manual payment: authorized staff should record payment method, amount, date, reference/receipt and any balance due.
- Cancellation, refund, transfer, pause or slot change: define the permitted cases and record the reason and staff action.
- QR tickets: QR codes should contain a secure identifier, not sensitive personal data; the server should look up the live membership status.

3.4 Courses and Online Learning

Purpose: allow visitors to discover exam-preparation courses and allow students who purchase a course to access the content covered by their purchase.

Student workflow

1. Student browses the course catalogue and filters or opens courses such as OAS, OPSC, IAS/UPSC or other approved course categories.
2. Student reviews the course description, syllabus, instructor, lessons/chapters, language, price, access duration, sample content and purchase terms.
3. Student selects a course, completes checkout and receives access after the payment is verified.

4. Student opens the course from their dashboard, watches available lessons and downloads only the resources permitted by the course rules.
5. The platform may track completed lessons, last watched lesson and overall progress if the client approves progress tracking.

Admin workflow and content structure

1. Admin creates a course and enters its details, price, syllabus, access period and publication status.
2. Admin adds modules/sections, chapters, lesson videos, descriptions, attachments and optional sample lessons.
3. Admin previews the course and publishes it. Updates to already-purchased course content should follow a policy agreed with the client.
4. Admin views enrollments, purchase activity and course-level sales reports if included.

Video access decision - must be confirmed

OPTION	WHAT IT MEANS	IMPORTANT CONSIDERATION
Streaming only	Students watch video lessons inside the website/app.	Generally provides more control than sharing raw files, but requires appropriate hosting and access controls.
Downloadable video	Students can save video files to their own devices.	Once downloaded, a file can be copied or shared; complete prevention of redistribution is not realistic.
Protected offline access / DRM (optional)	Specialized encrypted delivery or rights management.	More complex and may involve extra licensing, device, browser and recurring costs.

The platform should not assume downloadable videos are required until the client confirms the intended model. Also confirm whether course access is lifetime, for a fixed number of months, or until a specific date.

Other requirements to confirm

- Can students buy one course at a time, bundles, discounts or coupon codes?
- Are videos uploaded directly to the platform, or should a third-party video hosting service be used?
- Is course access transferable, refundable or shareable between devices?
- Should the student be able to download attached notes, subtitles or transcripts?
- Who will prepare and upload the initial course content, thumbnails, lesson titles and syllabus?

3.5 PDF Materials

Purpose: provide one catalogue for free and paid study materials, question papers, notes and question-and-answer documents.

Student workflow

1. Student browses PDF materials and can view available details such as title, exam/category, description, price and a permitted preview.
2. For a free PDF, student selects Download or View and receives access according to the file's publication settings.
3. For a paid PDF, student completes checkout. The system verifies payment and records a purchase entitlement for that account.

4. The student can return to the dashboard and download the previously purchased PDF again without paying again, subject to the agreed product terms.

Admin workflow

1. Admin uploads a PDF, adds its title, category, description, price, preview (if applicable) and publication status.
2. Admin chooses whether the material is free or paid and publishes it.
3. Admin updates or replaces a file when necessary and reviews purchase/download reports if included.

Important requirements

- Paid files should be delivered through authenticated or otherwise controlled access rather than relying on an openly exposed permanent file URL.
- Purchase records must be retained so that repeat downloads do not create duplicate charges.
- Consider buyer-specific watermarking as a deterrent to sharing; it does not guarantee that copying will be prevented.
- For low-priced items such as a ₹5 PDF, confirm transaction costs and consider a multi-PDF cart or bundle to reduce checkout overhead.
- Confirm whether “permanent access” means the purchase remains in the student account indefinitely, including after the PDF is replaced or removed from public sale.

3.6 Mock Tests and Online Examinations

Purpose: provide structured exam practice for categories such as Banking, Railway, OPSC/OAS, UPSC/IAS and any additional categories approved by the institute.

Student workflow

1. Student chooses an exam category, level and test from the catalogue. The page shows duration, number of questions, maximum marks, marking rules, number of allowed attempts and result-release policy.
2. Student reads the instructions and starts the test. The server records the attempt and calculates the deadline using the test configuration.
3. Student answers questions, navigates between them, changes answers where allowed and marks questions for review. The interface shows answered, unanswered and review status.
4. Responses are saved regularly. The test may be submitted manually; if the configured time limit is reached, it is automatically submitted according to the agreed rule.
5. The system scores the attempt based on the exam's configured rules and displays results when they are allowed to be released.
6. The student sees score, percentage, correct/incorrect/unanswered counts, time spent and subject-wise performance where topic data is available.
7. The platform may recommend weaker topics, related lessons, PDFs or practice tests based on the result data.

Admin / test manager workflow

1. Admin creates exam categories and levels, then creates a test with duration, total marks, questions, marking rules, access price and availability window.
2. Admin adds questions and answer options, identifies correct answers and may add explanations, difficulty level, subject and topic tags.
3. Admin previews the test, checks scoring and publishes it.

4. Admin reviews participation and results and can correct an incorrectly configured test through an auditable process. Changes to a live test must not silently alter completed attempts.

Test engine requirements

FEATURE	PROPOSED BEHAVIOUR
Flexible test settings	Admin configures question count, maximum marks, duration, positive marks, negative marks and section rules; 200 marks is an example, not a fixed rule for every exam.
Question navigation	Student can move next/previous, select a question, mark for review and see unanswered questions.
Answer persistence	Answers are saved regularly and the test can recover safely from refresh or temporary connection loss, within agreed technical limits.
Timer and submission	Server is authoritative for the deadline. Auto-submit is triggered when time expires; client-side timer alone is not trusted.
Question bank	Questions can be organized by exam, subject, topic and difficulty. Bulk import from an agreed spreadsheet format is recommended.
Results	Show the configured score and detailed breakdown; show answer explanations only when the release policy permits.
Attempts and access	Define free/paid tests, attempt limits, re-attempt rules, availability dates and when results become visible.

Rank and India-wide comparison

A website can calculate a rank among students who attempted a particular test on the platform. It should not describe that result as a true India-wide rank unless a credible nationwide comparison group or benchmark is available. The result screen should state the rank group, participant count and test or test version. Percentiles should be used only when the population and calculation are meaningful.

Optional anti-cheating features

Question/option randomization, basic tab-change warnings, attempt logs and restrictions on leaving a test page may be considered. Camera-based proctoring, identity checks or advanced invigilation should be treated as separately scoped features because they can affect privacy, device compatibility, support requirements and cost.

4. Shared workflows across modules

4.1 Account registration and login

1. Student registers with the approved set of information (for example, name, mobile number and email) and verifies the contact method if verification is included.
2. The system securely creates the account and provides login and password-recovery functionality.
3. The student dashboard displays the student's library membership, course enrollments, PDF purchases, mock-test results and notifications, based on the access they actually hold.
4. If admin creates the account manually, the student receives an activation or password-setup link. Staff should not need to know the student's permanent password.

Decision: confirm whether sign-up is open to everyone, limited to invited students, or subject to admin approval.

4.2 Common payment and order workflow

Required payment sequence

Select a plan/item → Review the final price and terms → Create a pending order → Redirect to or open the payment provider → Verify the result on the server → Mark the order paid or failed → Grant the correct entitlement → Send confirmation/receipt.

A browser redirect to a success page is not sufficient evidence of payment by itself. The backend must verify the payment through the chosen provider's supported server-side confirmation mechanism. Duplicate notifications must be handled safely. Payment-pending and failed orders should remain visible for support and reconciliation.

PAYMENT CASE	EXPECTED SYSTEM BEHAVIOUR
Successful and verified	Mark order paid once, grant the relevant access and send a confirmation.
Failed or cancelled	Do not grant paid access; show a clear status and allow retry where appropriate.
Pending / delayed confirmation	Keep the order pending and allow safe status refresh/reconciliation; do not create a duplicate purchase.
Duplicate provider notification	Process idempotently; do not duplicate a subscription, purchase entitlement or receipt.
Refund	Record the refund amount, reason, date and status; update access according to the client's approved refund rules.
Offline/manual payment	Record who received it, payment method, amount, reference, receipt and any amount still due.

4.3 Confirmation and reminder notifications

Notifications should be triggered by defined events rather than sent manually wherever possible. The client must approve the channel(s), message content, sender identity and service costs.

EVENT	PROPOSED MESSAGE CONTENT
Library subscription confirmed	Membership ID, plan, selected days/time, start date, expiry date, amount and ticket/access guidance.
Subscription nearing expiry	Expiry date, current status and renewal link. Reminder schedule must be confirmed.
Subscription expired	Current status, any access restriction and renewal instructions.
Course/PDF purchase confirmed	Item purchased, transaction reference, amount and how to access the item.
Payment issue	Order reference, current status and safe next steps; never request passwords or full card details by email.
Mock test completed	Score/results availability and link to the result screen, when result notifications are enabled.

Email can be the baseline notification channel. SMS or WhatsApp messages should be included only if the client approves the provider, templates, opt-in requirements, usage limits and recurring charges.

4.4 Finance and transaction reporting

The system should keep distinct records for orders, payment attempts, confirmed collections, refunds and operating expenses. A payment collection report is not the same as a profit report. The financial dashboard should clearly label what is included and what is excluded from any totals.

- Filters by date range, module, plan/product, status, payment method and receipt/reference.
- Sales/collection totals for library subscriptions, courses, PDFs and paid tests.
- Refunds and failed/pending payments shown separately from confirmed collections.
- Operating expenses such as rent, electricity, salaries and supplies recorded with date, category, amount, description and supporting reference if required.
- Export to CSV/Excel if approved; access to finance reports restricted to authorized roles.
- If invoices or tax calculations are needed, the client must confirm the required legal/business rules and provide the correct registration and invoice details.

5. Dashboards, reports and non-functional expectations

5.1 Student dashboard

- Profile and account security settings.
- Library plan, membership ID/ticket, selected access days/time, start/end date, status, attendance history and renewal action.
- Courses purchased, access status and learning progress if enabled.
- PDF purchases and repeat-download links.
- Mock-test attempts, results, performance history and recommendations.
- Orders, payment status and receipts/confirmations where applicable.
- Notifications and support/contact information.

5.2 Admin dashboard

- Overview of student accounts, active/expiring library subscriptions, new inquiries, purchases and test participation.
- Content management for home pages, galleries, course materials and PDFs.
- Library plan, membership, attendance and manual-payment management.
- Question-bank and mock-test administration.
- Financial and operational reports according to permissions.
- Staff users, roles, settings and an audit history for sensitive administrative actions.

5.3 Quality and operational expectations

AREA	EXPECTED BASELINE
Responsive design	Core journeys should work on current mobile, tablet and desktop browsers.
Security	HTTPS, secure password hashing, server-side validation, role and entitlement checks, rate limiting for sensitive endpoints and

AREA	EXPECTED BASELINE
	protection of secrets.
Privacy	Collect only necessary personal information; restrict staff access; publish an approved privacy notice and define data-retention rules.
Reliability	Handle payment callbacks, test submissions and subscription updates without duplicate records.
Backups	Define backup frequency, retention, access control and a tested restoration process. Backup frequency and recovery targets require client approval.
Monitoring	Capture application errors and important operational events without unnecessarily logging passwords, payment secrets or sensitive personal data.
Performance	Set practical page-load, concurrent-use and test-capacity expectations after expected traffic and content volumes are known.
Accessibility and usability	Use readable text, clear form errors, keyboard-friendly controls where practicable and consistent navigation.
Content and SEO	Public content should have editable page titles/descriptions and appropriate image handling if search visibility is required.
Maintenance	Agree who handles updates, bug fixes, hosting, renewals, backups, incidents and support after launch.

6. Client decision register - please complete

The items below are intentionally written as direct questions so that the client can confirm the expected behaviour. Please write an answer, tick an option, or add an explanation in the client response column. If an item is left undecided, the delivery team should not assume a costly or business-critical behaviour without written agreement.

6.1 Business identity and website

ID	QUESTION / DECISION	CLIENT RESPONSE / NOTES
B1	What is the official institute name, logo, brand colours and contact information?	_____
B2	What domain/subdomain should be used, and who owns DNS/domain access?	_____
B3	Which pages are required besides the six listed modules? (About, Faculty, Results, Testimonials, FAQ, Contact, etc.)	_____
B4	Which languages must the interface and content support?	_____
B5	Who will provide and approve content, photos, videos, PDFs and question papers?	_____
B6	Should the admin manage banners, galleries, notices and home-page sections without developer support?	[ ] Yes [ ] No Notes: _____

6.2 Library subscriptions and physical access

ID	QUESTION / DECISION	CLIENT RESPONSE / NOTES
L1	Confirm fees for monthly, quarterly, half-yearly and annual plans. Are discounts or custom plans required?	_____
L2	How are start/end dates calculated: calendar months, fixed days or another rule?	_____
L3	Can students choose specific days, time slots or seat numbers? What are the slot hours and capacity?	_____
L4	How should the system handle a full slot: block, waitlist or admin approval?	_____
L5	How will attendance be checked: QR ticket, membership ID, staff search, access device or another method?	_____
L6	Are same-day starts, pauses, extensions, transfers, cancellations and refunds allowed? State rules.	_____
L7	Should renewal start immediately or after the current subscription ends?	_____
L8	Which reminders should be sent, and how many days before expiry? (Example: 7, 3 and 1 day.)	_____
L9	Which offline payment modes are accepted? Should receipts be generated for cash/UPI payments?	_____
L10	Does the library need check-in/check-out time, attendance reports, seat utilisation or waiting lists?	_____

6.3 Courses and videos

ID	QUESTION / DECISION	CLIENT RESPONSE / NOTES
C1	Which exact course names, exam categories and sub-categories are required at launch?	_____
C2	Is course access lifetime, time-limited or tied to a course end date?	_____
C3	Should students stream videos, download videos, or both?	[ ] Stream [ ] Download [ ] Both
C4	Where will videos be hosted? Is a third-party hosting/DRM service acceptable if needed?	_____
C5	Can students buy bundles/coupons, and are refunds/transfers allowed?	_____
C6	Should course progress, lesson completion and last-watched position be saved?	[ ] Yes [ ] No Notes: _____
C7	Who will upload the initial courses, chapters, videos, notes and thumbnails?	_____

6.4 PDFs and digital purchases

ID	QUESTION / DECISION	CLIENT RESPONSE / NOTES
P1	Does permanent access mean repeat downloads remain available indefinitely in the student account?	_____
P2	Can PDFs have previews, watermarks, print restrictions or download limits?	_____
P3	Should paid PDFs be purchased separately, through a cart, bundles or all these options?	_____
P4	Are refunds or replacement files allowed after a PDF has been purchased?	_____
P5	Who will supply, categorize and maintain the initial PDF collection?	_____

6.5 Mock tests

ID	QUESTION / DECISION	CLIENT RESPONSE / NOTES
M1	Confirm all exam categories/levels at launch and the language(s) of questions.	_____
M2	For each test, who sets duration, marks, negative marking, attempts and result release?	_____
M3	How will questions be entered: manual form, spreadsheet import or both? Is there an approved template?	_____
M4	Should students see explanations/correct answers immediately, after a date or only when released by admin?	_____
M5	Should tests be free, paid, or include both types? Are subscriptions or bundles needed?	_____
M6	What ranking is required: same test, batch, all platform users, or a third-party national benchmark?	_____
M7	Are tab-change warnings sufficient, or is proctoring/identity verification required?	_____
M8	How many questions and simultaneous test takers are expected at launch?	_____

6.6 Payments, notifications and finance

ID	QUESTION / DECISION	CLIENT RESPONSE / NOTES
F1	Which payment provider should be used? Who will create and own the merchant account?	_____
F2	Which payment methods are required (UPI, cards, net banking, wallets, etc.)?	_____

ID	QUESTION / DECISION	CLIENT RESPONSE / NOTES
F3	Are tax calculations, GST fields, formal invoices or specific receipt numbering required?	_____
F4	Which channels are required: email, SMS, WhatsApp or in-site notifications?	_____
F5	Who provides sender/domain verification and pays email/SMS/WhatsApp usage fees?	_____
F6	Which expenses should finance staff record, and who can view financial reports?	_____
F7	Should reports export to CSV/Excel/PDF, and which report templates are mandatory?	_____

6.7 Technical operations and support

ID	QUESTION / DECISION	CLIENT RESPONSE / NOTES
T1	Who owns and pays for domain, hosting, database, file/video storage and backup services?	_____
T2	What approximate number of students, files, courses, questions and concurrent test takers is expected?	_____
T3	Who is responsible for ongoing content updates, hosting maintenance, backups and incident response?	_____
T4	What support period is expected after launch, and what is considered a bug versus a new feature?	_____
T5	Are there any existing systems, databases or student records that must be imported?	_____
T6	Are there any third-party integrations not mentioned in this document?	_____

7. Optional additions and scope boundaries

The following features may add value, but they should be treated as optional unless the client expressly approves them. This section protects both parties from assuming that every possible feature is automatically included in the initial delivery.

OPTIONAL ADDITION	POTENTIAL VALUE	CLIENT DECISION
WhatsApp notifications / chatbot	Convenient reminders and support; may need business verification, templates and usage fees.	[ ] Include [ ] Later [ ] Not required
Coupon codes and bundles	Promotions for courses, PDFs or library plans.	[ ] Include [ ] Later [ ] Not required
Student certificates	Completion certificates for approved courses or tests.	[ ] Include [ ] Later [ ] Not required
Advanced video DRM / offline access	More controlled video delivery; can increase cost and platform complexity.	[ ] Include [ ] Later [ ] Not required

OPTIONAL ADDITION	POTENTIAL VALUE	CLIENT DECISION
Advanced exam proctoring	Camera, identity or invigilation features.	[ ] Include [ ] Later [ ] Not required
Waitlist / seat selection	More granular management of physical library capacity.	[ ] Include [ ] Later [ ] Not required
Advanced analytics	Cohort trends, course funnel, retention and business dashboards.	[ ] Include [ ] Later [ ] Not required
Mobile app	Separate iOS/Android apps beyond the responsive website.	[ ] Include [ ] Later [ ] Not required
Third-party national exam benchmark	Comparison against a verified external participant population.	[ ] Include [ ] Later [ ] Not required
Migration of existing data	Import existing students, subscriptions, courses or question banks.	[ ] Include [ ] Later [ ] Not required

Items not automatically included

- Any feature not described or approved in the final scope, including additional modules or third-party integrations.
- Payment provider fees, SMS/WhatsApp usage, premium video hosting/DRM, domain, hosting, storage and other external service charges unless expressly included in the commercial agreement.
- Creation of course videos, PDFs, question banks, exam explanations, photos, written content, translations or legal policies unless content creation is separately agreed.
- Guaranteed India-wide mock-test ranking without a reliable and agreed benchmark population.
- Absolute prevention of copying once a file has been downloaded by a student.
- Ongoing support, new feature development and content administration beyond the agreed support/maintenance arrangement.

8. Acceptance criteria and test scenarios

The following are proposed high-level acceptance checks. The parties should agree which are required for launch and add any institute-specific tests. A feature should be considered accepted when it behaves as agreed in the approved test environment and the related acceptance check passes.

AREA	ACCEPTANCE CHECK
Accounts	A student can register/log in and can see only their own account, purchases, subscription and results. Staff permissions restrict access by role.
Library payment	A verified successful payment creates one subscription and ticket with the correct plan, dates, time slot and amount. A failed payment does not activate access.
Library access	Ticket validation reflects the current status and checks allowed days/time. Renewal and expiry follow the approved policy.
Manual library entry	Authorized admin can create a subscription and record offline payment status, and the audit trail identifies who made the change.
Inquiry	A visitor can submit an inquiry, the record appears in admin, and authorized staff can update status and notes.
Course purchase	Payment verification grants access to the correct course only. Non-purchasers cannot access restricted lessons.

AREA	ACCEPTANCE CHECK
PDF purchase	A confirmed purchase grants access to the correct file, and the student can download it again without another charge.
Mock test	Configured duration and scoring rules are applied. Answers are saved as designed and an expired test submits according to the agreed rule.
Results and rank	Displayed result matches the test settings; ranking identifies its comparison group and participant count.
Reports	Report totals are traceable to transaction records and separate confirmed collections, pending payments and refunds as specified.
Notifications	Approved confirmation and reminder events trigger the correct message in the tested channel, subject to provider delivery.
Operations	The agreed backup, restore, monitoring and admin handover checks are completed before launch.

Suggested test cases before go-live

- Complete one successful purchase in each paid module and verify the resulting access.
- Test failed, cancelled, delayed and duplicate payment events.
- Test a subscription at the expiry boundary and check a full and an available library slot.
- Test student access restrictions by attempting to open another student's private records or a paid file without entitlement.
- Start a mock test, save answers, refresh or temporarily disconnect, then confirm the agreed recovery behaviour and automatic submission.
- Check mobile layouts, forms, email templates, admin reports and error messages.
- Perform a backup restoration rehearsal and confirm that the client knows how to contact support.

9. Delivery, change control and handover

9.1 Items to agree before work is treated as final scope

- Approved modules and features, including the decision register and optional additions.
- Approved design direction, page list and branding assets.
- Payment gateway, hosting, domain, storage and notification providers.
- Client responsibilities for providing content and business rules.
- Delivery milestones, commercial terms, support/maintenance period and the definition of completion.
- Acceptance checks and the person authorized to approve the work.

9.2 Managing changes

Any new requirement or material change after scope approval should be written down with its reason and expected behaviour. The delivery team should assess the effect on effort, cost, dependencies, delivery dates and testing. The client should approve the change before it is treated as included work. Small clarifications that do not materially change the scope may be handled through the agreed review process.

9.3 Suggested handover package

- Production website and the agreed set of modules/features.
- Admin login setup and role/permission configuration.

- Basic admin guide for managing subscriptions, content, courses, PDFs, inquiries, questions and reports.
- List of hosting, domain and third-party services, including the account owner and recurring cost responsibility.
- Backup/recovery and support contact instructions, where included in the agreed scope.
- Final test results and a record of any agreed known limitations or deferred features.

10. Client confirmation and sign-off

Please use this section to confirm that the proposed website structure and workflows have been reviewed. The signature confirms agreement with the requirements that have been marked as approved and documented, subject to any noted exclusions or pending decisions.

CONFIRMATION ITEM	CLIENT RESPONSE
Client / institute name	_____
Authorized representative	_____
Role / designation	_____
Overall requirements status	[ ] Approved [ ] Approved with changes [ ] Pending discussion
Open items attached / listed	[ ] No [ ] Yes - details: _____
Authorized signature	_____
Date	_____

Approval note

Approval of this document confirms the agreed product behaviour and scope direction. Commercial pricing, delivery milestones, payment terms, maintenance obligations and any legal terms should be documented separately or in the final signed agreement.
